

# Stock Management

*EFFICIENT STORE INVENTORY  
CONTROL FOR TELCOS &  
SPECIALIST RETAILERS*

# Your Benefits

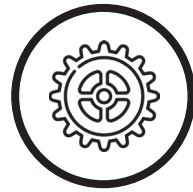

## TELCO STOCK MANAGEMENT

Fast implementation and low customization efforts due to an “out-of-the-box” management solution for CSPs.

## REDUCED STOCKTAKING COSTS

Reduced stocktaking costs by up to 50% with highly automated stock-management processes.

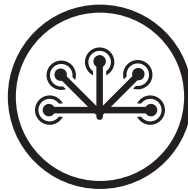

## AUTOMATION

Automate and simplify sales and fulfillment processes.

## REDUCED STORAGE COSTS

Improve product availability and minimize storage costs.

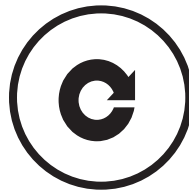

## OMNICHANNEL

Enable omnichannel fulfillment processes.

## REDUCED OPERATIONAL COSTS

Reduce training and support costs due to automated workflows and intuitive user design.

## SEAMLESS FULFILLMENT PROCESSES

POS and stock mgmt. running on one unified store platform. This enables a seamless transition of supply chain & fulfillment processes without any integration efforts.

“

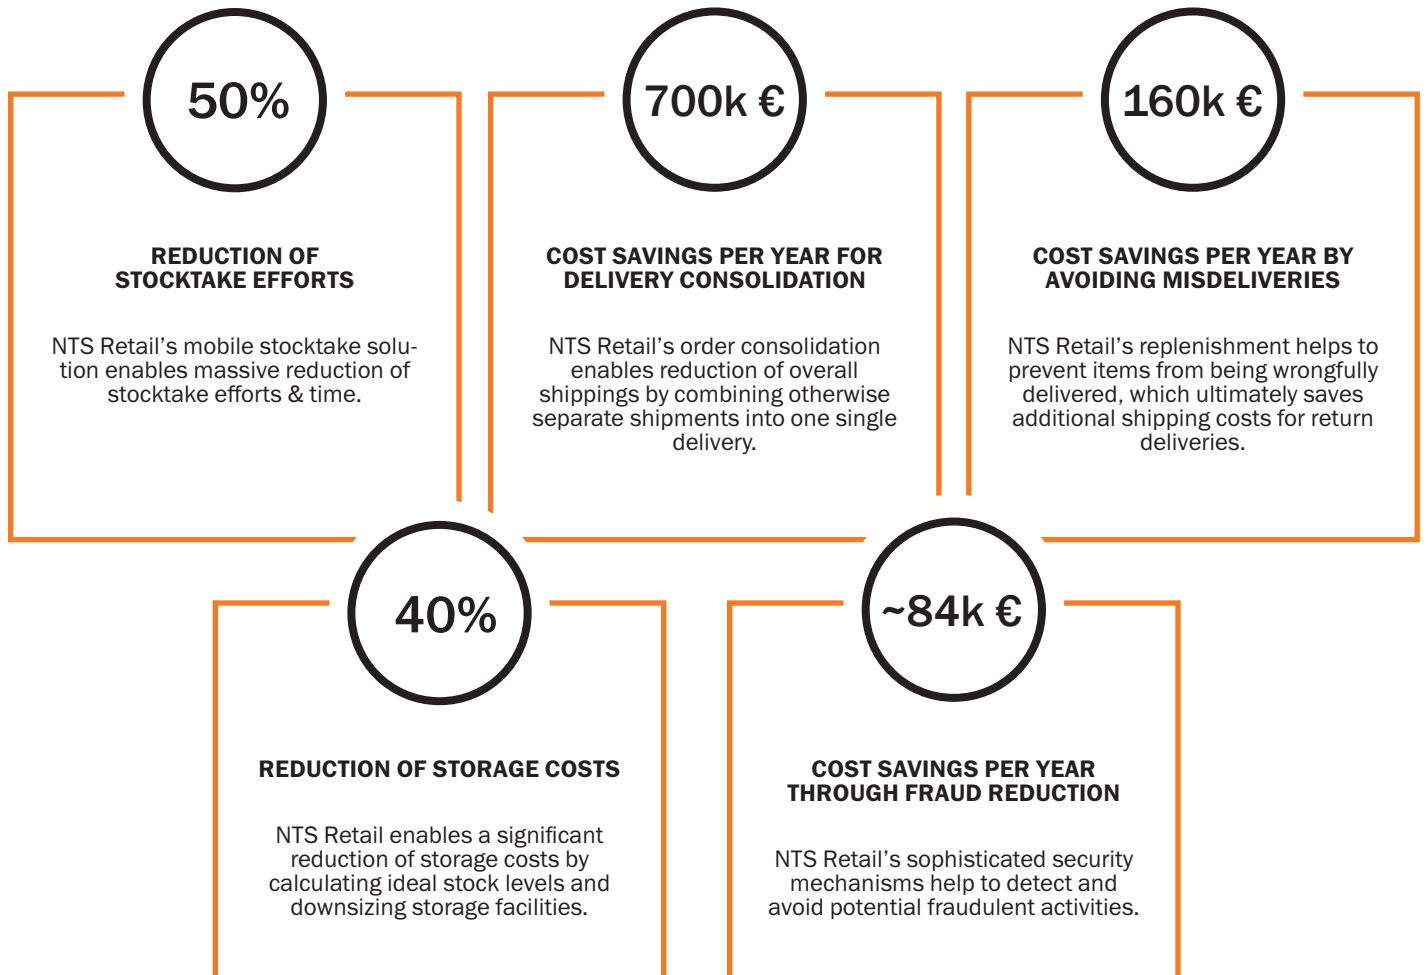

*“COMPARED TO PREVIOUS STOCKCOUNTS, WE ARE ABLE TO SAVE UP TO 50% OF THE PROCESS TIME.*

*ERROR SOURCES HAVE BEEN SIGNIFICANTLY REDUCED AND THE OVERALL HANDLING IS MUCH EASIER. EVEN THOSE THAT HAVE NOT RECEIVED ANY TRAINING CAN USE THE SOFTWARE WITHOUT ANY PROBLEMS.”*

”

Patrik Brüngger, Sales Logistics, Swisscom AG

# Your ROI

# Stock Management

- > *CENTRALIZED STOCK CONTROL*
- > *GOODS DISTRIBUTION SCENARIOS*
- > *SEAMLESSLY EMBEDDED IN YOUR BSS ENVIRONMENT*
- > *FEATURE OVERVIEW*

NTS Retail's omnichannel stock management solution has been designed to meet the specific requirements of telecom operators. Typical logistics processes for telco retail environments are covered "out-of-the-box".

This way, NTS Retail provides full visibility of stock levels and efficient goods fulfillment processes, which work perfectly in an omnichannel environment. Stock management workflows can be adapted to meet virtually any requirements. They can be performed in individual stores or executed and controlled from central warehouses. Thanks to its modular design, the system can be adjusted to any desired use case regarding stock control, delivery handling or goods postings.

# Centralized inventory control

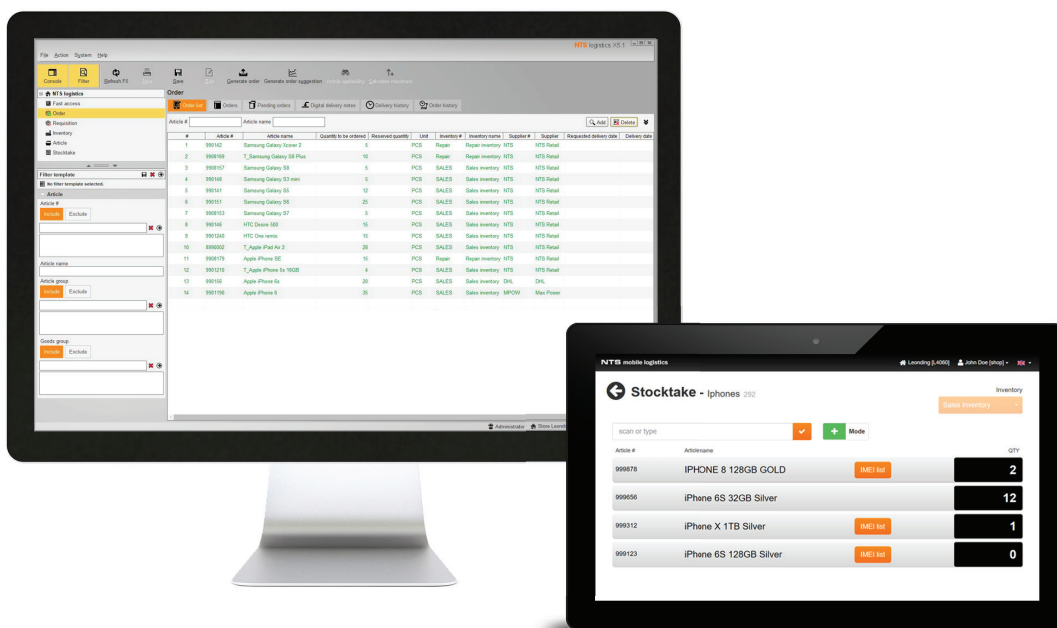

NTS Retail's centralized stock management system has been specifically designed to streamline inventory control within and across a telco retail network. Elaborate stock control functions automate and accelerate goods postings and ensure optimum product availability.

Our intuitive, secure solution enables swift and accurate stock handling, designed to perfectly carry out typical actions such as: goods acceptance, goods relocation, return shipments or physical stock counts.

NTS Retail includes several key functionalities, which allow for the efficient management of central and regional warehouses. Among them centralized order acceptance with credit line checks, picking orders, digital delivery notes and invoice issuing. All stock management processes (e. g. stock counts) can be monitored and controlled centrally. This guarantees a complete overview and absolute control over the entire retail logistics network.

## SHORT FACTS

- Adaptive stock management system
- Order functionality (processing & approval)
- Stock additions and removals (centralized and manual)
- Serial number status overview
- Goods receipt via digital delivery note
- Stock control and monitoring (individually or centralized)
- Access to stock levels across all branches
- Easy handling of shop-to-shop transfers
- Customer reservations and direct delivery option
- Overview of all pending, overdue, advised and partially delivered orders

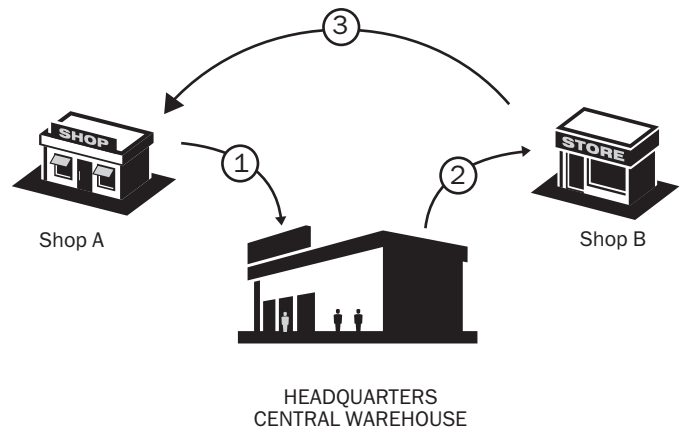

# Goods Distribution Scenarios

Depending on how your retail network is set up, there is a variety of possible ways to manage goods allocation across your stores and warehouse locations. The following scenarios illustrate possible ways of implementation, which are currently in operation using our solution at different clients.

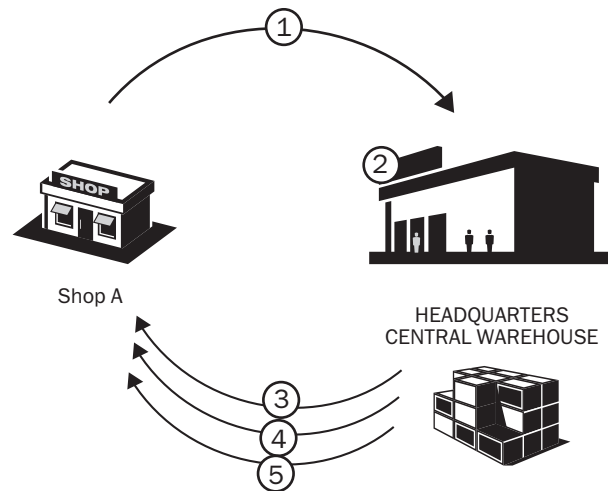

## SHOP-TO-SHOP TRANSFER VIA HEADQUARTERS

1. Shop A issues an order to the headquarters (HQ).
2. Shop B receives a transfer order from HQ.
3. Shop B sends the ordered goods to Shop A.

## GOODS REQUEST FROM THE SHOP TO THE CENTRAL WAREHOUSE

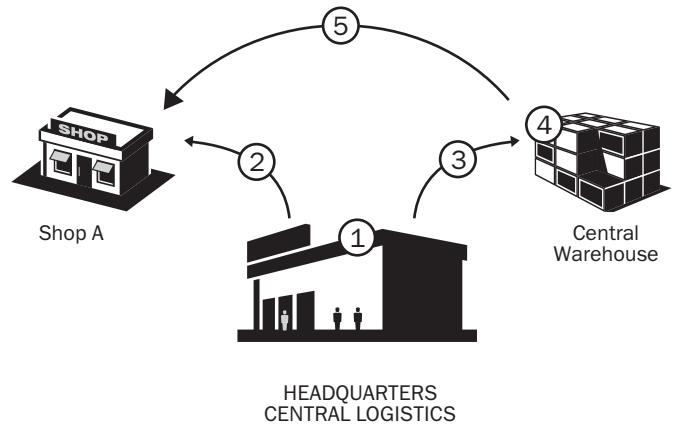

1. The shop submits an order to headquarters.
2. All orders are consolidated at the HQ.
3. Goods are advised by HQ and allocation orders are generated.
4. Goods are delivered from the central warehouse.
5. An invoice for the transferred goods is issued from HQ to Shop A.

# Goods Distribution Scenarios

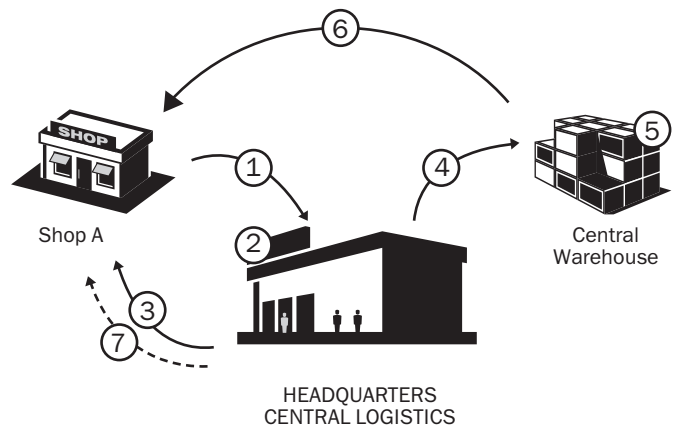

## CENTRAL GOODS ALLOCATION WITHOUT SHOP REQUEST

1. An order for Shop A is generated at headquarters.
2. Shop A is notified of the impending goods transfer.
3. The central warehouse receives a picking order from headquarters.
4. The central warehouse accepts the order and a (digital) delivery note is created.
5. The goods are transferred to Shop A with the delivery note.

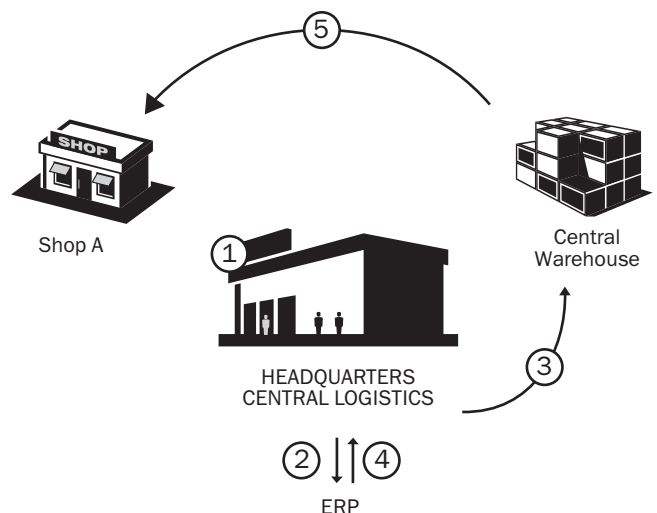

## CENTRAL GOODS ALLOCATION WITH SHOP REQUEST

1. Shop A sends an order to headquarters.
2. All orders are checked and consolidated at HQ.
3. Shop A is notified of the impending goods transfer.
4. The central warehouse receives a picking order.
5. The order is accepted at the warehouse and a (digital) delivery note is created.
6. The goods are transferred to the shop including the delivery note.
7. An invoice to Shop A for the order is issued by the central warehouse.

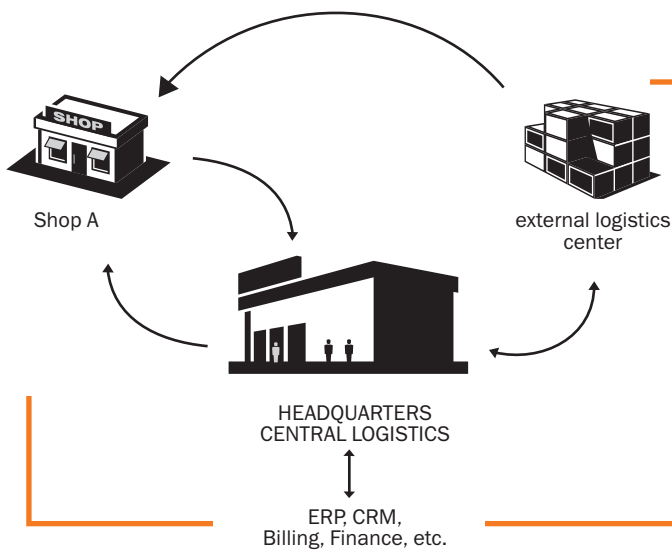

## CENTRAL GOODS ALLOCATION WITH AN EXTERNAL ERP SYSTEM

1. An order for Shop A is generated at the headquarters.
2. The order is submitted to the external ERP system.
3. The order is processed within the ERP system and then sent to the ERP-operated central warehouse; the order can also be sent to an external partner.
4. The goods transfer notice is imported from the ERP system into NTS central logistics.
5. The (digital) delivery note and the goods are sent to the shop.

# Seamlessly embedded

IN YOUR BSS ENVIRONMENT

NTS Retail seamlessly connects your store inventories with your central warehouses and logistics centers.

Perfectly interlinked with your backend IT landscape (ERP, CRM, Billing, Finance, etc.) NTS Retail guarantees a 360° inventory view. and smooth goods fulfillment processes.

## Feature overview
